

KIAN (KAIXIN) KANG

TECHNICAL ARTIST / AI PIPELINES & TOOLS

Chongqing, China | +86 158 2537 5077 | 122880509@qq.com

k-k-ing.github.io/kaixin-technical-art-portfolio/en | github.com/K-k-ing

Public Art undergraduate and technical art intern focused on AI-assisted asset production, editor tools, and verifiable workflows. Hands-on experience connecting AI generation, Blender asset optimization, and Unreal Engine scene validation. Seeking technical art and pipeline opportunities beginning in 2027.

EDUCATION

Sichuan Fine Arts Institute

2023 - 2027 (expected)

Bachelor of Arts, Public Art

Focus: public art design, spatial art design, and digital art practice.

EXPERIENCE

NetEase Games - ArtSpark

Aug 2026 - Present

Technical Art & AI Pipeline Intern

- Contribute to implementation and debugging of a multimodal AI workflow canvas. The team's product has more than 200 regular users, with double-digit weekly user additions.
- Build and refine Krea2 + LoRA image-to-image workflows in ComfyUI, testing reference-image preservation, conditioning, and advanced sampling; maintain test records and workflow documentation.
- Support cartoon racetrack scenes and AI asset integration. Developed an Unreal Editor Python orbital capture tool with trajectory planning, capture validation, and image-sequence output for 3D Gaussian Splatting workflow tests.
- Participate in evaluations of emerging AI tools, including GPT-6 Astra, World Labs Atlas, and DeepSeek Harness; support asset generation for other studios, including the *Fantasy Westward Journey* and *Tianxia* teams.

AI Illustration & Stable Diffusion Practice

2023 - Present

- Create novel illustrations and character concepts with Stable Diffusion; provide custom AI illustration services, developing practical prompt-design and style-control experience.

SELECTED PROJECTS

MATE - Material Analysis & Texture Editor

Personal functional prototype

- Built an Electron, React, and Three.js / R3F desktop tool for GLB validation, live preview, asset health checks, and standardized six-view capture, with Qwen integration for material analysis.
- Convert AI descriptions into editable asset profiles through human review, parameter completion, material recipes, and stable material-slot bindings; distinguish AI, system, and user data sources.
- Implemented UV preflight checks, candidate semantic masks, and region-level Base Color, Roughness, and Metallic previews. Tested import and analysis workflows on approximately 4.9K-, 53K-, and 1.9M-triangle assets; these are workflow checks, not real-time performance benchmarks.

SELECTED PROJECTS / CONTINUED

TrackAssemblyTool - Unreal Editor Track Assembly Personal project

- Developed an Unreal Editor Python tool that places Static Mesh instances along a Spline using HISM, on the left, right, or both sides, with straight, curved, and sloped section classification.
- Support manual region overrides, inside/outside curve rules, and configurable asset placement. Built regression tests for core logic and the UI bridge, and validated the tool in cartoon racetrack scenes.

Face Value - AI Geometry Budget Planner Personal web prototype

- Built a pre-generation planning prototype that uses visual analysis to suggest geometry budgets, distinguishing silhouette and structural needs from texture-level detail.
- Integrated frontend, backend, and geometry-planning APIs with health checks, service status, and request logs. Provide budget candidates for practical generation tests, aiming to preserve form with appropriate geometry costs rather than maximize face counts.

AI Pilgrim - Asset Production & NPC Interaction Personal project

- Asset workflow: connected AI concept generation, Tripo modeling, Blender separation and optimization, and UE5 scene validation across robot, spacecraft, and ruin studies; documented a reusable production process.
- Archive Terminal 07: built an NPC interaction prototype with proximity detection, prompts, dialogue UI, and conversation history, integrating a language-model API with basic fallback responses.

TECHNICAL SKILLS

AI workflows	Stable Diffusion (since 2023), ComfyUI, LoRA image-to-image workflows, prompt design, Tripo
Assets & engines	Unreal Engine 5 scene assembly and asset validation, Blender asset optimization, Photoshop, basic Blueprint interactions
Tools & pipelines	Unreal Editor Python, structured JSON data, API integration, AI-assisted development, regression validation
Production practice	Asset breakdown, optimization, scene validation, technical documentation, resource organization, English technical reading

LEADERSHIP & INTERESTS

Founded and operated a university tennis club. Personal interests include tennis, fitness, travel, and extreme sports.

AVAILABILITY

Seeking technical art, AI pipeline, and tools opportunities beginning in 2027.

For eligible U.S. internships, I can explore J-1 sponsorship through a designated third-party sponsor after receiving a host-company offer, subject to sponsor review, an approved training plan, and visa approval.
