

# KIAN (KAIXIN) KANG

3D WORLD MODELS / SPATIAL INTELLIGENCE

TECHNICAL ARTIST / AI PIPELINES & TOOLS

Chongqing, China | +86 158 2537 5077 | 122880509@qq.com

k-k-ing.github.io/kian-worldmodel-portfolio/en | github.com/K-k-ing

Public Art undergraduate and technical art intern exploring how world-model understanding can become structured, editable 3D production systems. Prototype workflows connecting spatial evidence, generative assets, Blender, and Unreal Engine, with an emphasis on traceable decisions, uncertainty, and validation. Seeking world-model, spatial intelligence, generative 3D, and technical art opportunities from 2027.

## EDUCATION

**Sichuan Fine Arts Institute**

2023 - 2027 (expected)

Bachelor of Arts, Public Art

Focus: public art design, spatial art design, and digital art practice.

## EXPERIENCE

**NetEase Games - ArtSpark**

Aug 2026 - Present

Technical Art & AI Pipeline Intern

- Contribute to implementation and debugging of a multimodal AI workflow canvas. The team's product has more than 200 regular users, with double-digit weekly user additions.
- Build and refine Krea2 + LoRA image-to-image workflows in ComfyUI, testing reference-image preservation, conditioning, and advanced sampling; maintain test records and workflow documentation.
- Support cartoon racetrack scenes and AI asset integration. Developed an Unreal Editor Python orbital capture tool with trajectory planning, capture validation, and image-sequence output for 3D Gaussian Splatting workflow tests.
- Participate in evaluations of emerging AI tools, including GPT-6 Astra, World Labs Atlas, and DeepSeek Harness; support asset generation for other studios, including the *Fantasy Westward Journey* and *Tianxia* teams.

**AI Illustration & Stable Diffusion Practice**

2023 - Present

- Create novel illustrations and character concepts with Stable Diffusion; provide custom AI illustration services, developing practical prompt-design and style-control experience.

## SELECTED PROJECTS

**WORLDIR - World Model Assisted Scene Compiler**

Personal research prototype

- Built an experimental Astra-to-Unreal pipeline that translates structured scene descriptions into editable UE actors; investigated why semantic understanding is not a reliable geometric constraint.
- Tested Marble Gaussian/PLY queries and camera projection. A 20-point pixel-to-3D test returned 17 supported queries and 3 unsupported regions; coordinates remained in uncalibrated source space.
- Implemented a bounded Blender floor-compilation case: 9 placements share 1 mesh datablock, with 6 observed and 3 design-inferred placements retaining separate provenance and geometric authority.
- Investigated WorldSculpt's fragmented output and external-asset fitting. WORLDIR v2's general Scene Graph integration is in development; a full Asset Resolver and production-validation loop remain proposed.

---

## SELECTED PROJECTS / CONTINUED

### MATE - Material Analysis & Texture Editor

Personal functional prototype

- Built an Electron / React / Three.js desktop prototype for GLB inspection, asset health checks and standardized six-view capture, with Qwen material analysis.
- Turn AI suggestions into human-reviewed profiles; built UV preflight, candidate semantic masks and region-level material previews.

### TrackAssemblyTool - Unreal Editor Track Assembly

Personal project

- Built Spline-based HISM placement in Unreal Editor Python, with section classification, inside/outside rules and manual region overrides.
- Built regression tests for core logic and the UI bridge; validated configurable placement in cartoon racetrack scenes.

### Face Value - AI Geometry Budget Planner

Personal web prototype

- Built a visual-analysis prototype that proposes geometry budgets while distinguishing structural and silhouette needs from texture-level detail.
- Integrated analysis APIs, health checks and request logs; provide budget candidates for actual generation checks, not guaranteed quality predictions.

### AI Pilgrim - Asset Production & NPC Interaction

Personal project

- Asset workflow: AI concepts, Tripo candidates, Blender inspection/optimization and UE5 integration across robot, spacecraft and ruin studies.
- Archive Terminal 07: NPC dialogue prototype with proximity detection, conversation history and language-model API integration.

---

## TECHNICAL SKILLS

|                              |                                                                                                                                                       |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Spatial prototyping</b>   | Astra / Marble experiments, camera projection, Gaussian/PLY source-space queries, observed/inferred scene decisions, WorldSculpt mesh troubleshooting |
| <b>AI workflows</b>          | Stable Diffusion (since 2023), ComfyUI, LoRA image-to-image workflows, prompt design, Tripo                                                           |
| <b>Assets &amp; engines</b>  | Blender, UE5 assembly / asset validation, Photoshop, basic Blueprint interactions                                                                     |
| <b>Tools &amp; pipelines</b> | Unreal Editor Python, structured JSON data, API integration, AI-assisted development, regression validation                                           |
| <b>Production practice</b>   | Asset breakdown, optimization, scene validation, technical documentation, resource organization, English technical reading                            |

---

## LEADERSHIP & INTERESTS

Founded and operated a university tennis club. Personal interests include tennis, fitness, travel, and extreme sports.

---

## AVAILABILITY

Open to world-model, spatial intelligence, generative 3D and technical art roles from 2027.

For eligible U.S. internships, I can explore J-1 sponsorship through a designated third-party sponsor after receiving a host-company offer, subject to sponsor review, an approved training plan, and visa approval.
